# Telehealth and Digital Innovations

# Telerehabilitation/Telehealth/Telehealth PT

**World Health Organization,  
“Telehealth involves the use of  
telecommunications and virtual  
technology to deliver health care  
outside of traditional health-care  
facilities.”**

**Telehealth involves remote health  
care visits delivered through an  
online/digital platform.**

# Modes of Telehealth

California Telehealth Resource Center defines telehealth:

“Telehealth is a collection of means or methods for enhancing health care, public health, and health education delivery and support using telecommunications technologies.”

	TELEMEDICINE TOOLS	TELEMEDICINE SERVICES
<b>Clinician to Clinician</b> 	Clinicians often communicate through e-mail, video, or both	Dermatology Radiology Surgical peer mentoring Emergency trauma and ICU care
<b>Clinician to Patient</b> 	Video Phone E-mail Remote wireless monitoring Internet	Care for chronic conditions Medication management Wound care Counseling Postdischarge follow-up Mental health
<b>Patient to Mobile Health Technology</b> 	Wearable monitors Smartphones Mobile apps Video E-mail Web portals Games	Health education Monitoring of physical activity Monitoring of diet Medication adherence Cognitive fitness
 <b>Integration with electronic medical records</b> <b>Data analytics</b>		
<b>Figure 1. How Doctors Use Telemedicine and How Patients Benefit.</b> Adapted from the American Telemedicine Association. ICU denotes intensive care unit.		

# Introduction: Unleashing the Potential: Telehealth Simulations in Modern Healthcare Education

- How can technology redefine healthcare education methods to better align with the demands of modern healthcare?
- What role do practical skills and real-world experience play in preparing future healthcare professionals?
- How can interprofessional collaboration and inclusivity be integrated into healthcare education?
- Digital Innovation in Healthcare and Healthcare Education

# Telehealth Delivery in Healthcare Education

## Telehealth Implementation and Teaching Strategies During COVID-19 and Beyond in Gait, Balance, and Mobility Clinic for Community-Dwelling Older Adults

Nupur Hajela, PhD, DPT, PT; Bryan Kwon, DPT, PT, GCS; Katria Alexandra Penson, DPT, PT; Alan Lee, PhD, DPT, CSW, PT, GCS

**TABLE 1** Framework of the Telehealth Gait Balance and Mobility Clinic Set Up for an 8-Week Physical Therapy Program for a Community-Dwelling Older Adult

Number and Type of Session	Telehealth Delivery Plan (8 Wk or 16 Sessions)
Pretelehealth orientation week (2 wk)	Orientation to telehealth for students Mock telehealth practice session (Student and CI)
Session 1	Telehealth (Zoom) setup day SPT with the patient: - SPT helps patient download and get used to the online platform (eg, Zoom) - SPT helps patient get oriented to the camera setup and the ideal place with optimal lightening for the telehealth session - SPT discusses with patients the safe telehealth setup such as the use of a steady chair without wheels and the place next to the wall. Any other equipment that will be needed - SPT discusses equipment and accessories needed (theraband, chair, stool, etc) - SPT takes verbal and written informed consent for telehealth delivery
Session 2 and 3	Telehealth initial evaluation
Session 4-7	Telehealth PT intervention days
Session 8 and 9	Telehealth midterm evaluation (client) Student midterm CPI (student self-evaluation and feedback from CI)
Session 10-15	Telehealth PT intervention days
Session 16	Telehealth discharge evaluation
Posttelehealth (1 wk)	SPT completed discharge note, provide revised HEP to their patient Final CPI (SPT provided self-assessment through CPI and get feedback from their CI) SPT completed reflection assignment SPT participate in discussion board activity

Abbreviations: CI, clinical instructor; CPI, Clinical Performance Instrument; PT, physical therapist; SPT, student physical therapist.

Topics in Geriatrics Rehabilitation

**TABLE 2** Virtual Clinical Learning: Examples of Various Activities that were Designed for Students for the Online Clinical Learning Course to Enhance Engagement and Foster Active Learning

### 1) Discussion Board Activity

- What do you think will be the minimum technical requirement to deliver telerehabilitation? With aging adults, how would you bridge the gap to maximize accessibility?
- What are the potential costs vs benefits of telehealth in physical therapy? Are you in support of telehealth or do you oppose it? Can you provide reasons for your choice?
- In the state of (X)—what are the current telehealth-related laws and reimbursement policies? How do you see things changing in the near future? If you have to argue—how would you convince the legislators that telehealth sessions should be reimbursed?
- Which patient populations do you think the patient can benefit most from telerehabilitation? Which patient population will benefit the least? Justify your answers.

### 2) Peer Observation and Evaluation

Based on observation and interaction with your peer for the last (X) wk of telehealth experience, provide feedback on your peer's professionalism and interactions with the patient and you, as well as his/her organization, performance, and delivery of therapeutic activity in a telehealth setting. Please provide 3 areas that your peer has impressed you and 3 areas that your peer could improve and advance as a student physical therapist.

### 3) Reflection Assignment

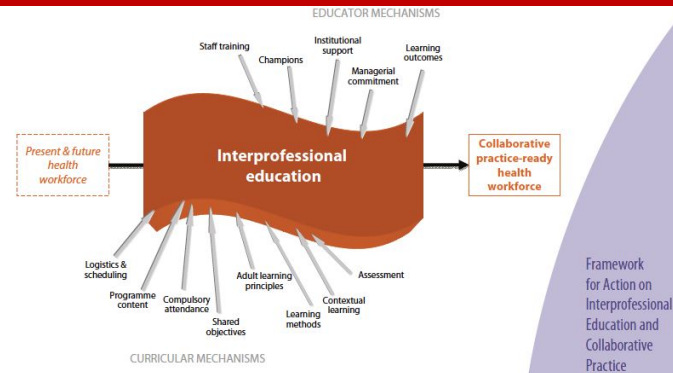

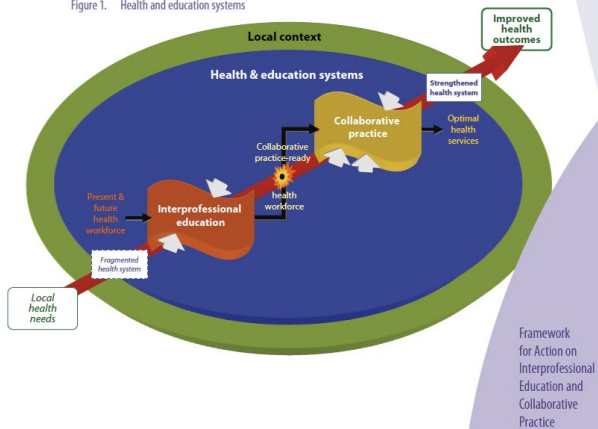

What are your overall thoughts on telehealth as a physical therapy delivery method? Do you think telehealth will be used more frequently in the future? Why or why not? Based on your individual experience shed light on the challenges and opportunities related to telehealth physical therapy. Provide examples from your own therapy sessions.

# Telehealth based Simulation

The screenshot shows a Zoom meeting window with a document open. The document is titled "FRESNO STATE Discovery, Diversity, Distinction. Telehealth Simulation based Interprofessional Education March 14, Spring 2022". The text on the document reads: "We are excited to have you attend the CHHS Telehealth Interprofessional Education Session. Here is the agenda with details. Please review the agenda and the review items including the Telehealth Simulation PD Case before coming for the live zoom session. Kindly fill out the pre telehealth activity survey before reviewing the course material. You are requested to complete the post telehealth survey at the end of the live zoom session."

Agenda	
March 9, 2022	Please fill out the PRE telehealth activity survey (link: <a href="https://forms.gle/WzRoZz98UJISzm7">https://forms.gle/WzRoZz98UJISzm7</a> ) before coming to this session and before reviewing the
March 9-13, 2022	1. Please review the (00:08:25 / 01:31:36 h) by the faculty - PT (Dr. Z and Dr. Hajela), Nursing (Dr. Bai) and SWE (Dr.

The Zoom interface shows a meeting titled "AGENDA and CA..." and a sidebar with several participants. The system clock indicates "Mon Mar 14 5:46 PM".

The screenshot shows a Zoom meeting window with a video feed of a woman sitting on a bed. The woman is wearing glasses and a grey t-shirt. The Zoom interface shows a meeting titled "Zoom Meeting" and a sidebar with several participants, including Nupur Hajela, Harkirat, Bai, Ryan Waltheris (Social W..., Allison Mahaffy RN, Eileen R Jimenez, and Leslie Zarrinkhameh. The system clock indicates "Mon Mar 14 6:20 PM".

# Telehealth based Simulation - Discussion

## Telehealth Simulation IPE student discussion

### Learning Objectives:

1. Learn our own role as healthcare professional in discharge planning
2. Learn the role of other healthcare professionals in discharge planning
3. Learn how to use telehealth for discharge planning meeting

### A. During Telehealth Simulation Observation

#### IPEC Competency domains:

Competency Domain 1: Values/Ethics for Interprofessional Practice

Competency Domain 2: Roles/Responsibilities

Competency Domain 3: Interprofessional Communication

Competency Domain 4: Teams and Teamwork

Competencies	PT/Nursing/SWE Student	What went well	What would you do differently
Competency 1			
Competency 2			
Competency 3			
Competency 4			

### B. Post Telehealth Simulation Discussion

Questions to Discuss in breakout room with students of other health professionals (Faculty and students engage in discussion and fill the table in google doc)

1. What responsibilities do each of you have for the patient involved in discharge planning that we just observed in telehealth simulation? (All students should be able to answer here)
2. Based on your review of the case and telehealth simulation observation, what would be your priority for the treatment and why? (PT, RN students can answer this)

Group/ Breakout room No. 1		
Themes to discuss	Their respective role	Role of other team members
PT		
Nursing		
Social Work Education		

# SPICE –R2 Instrument: Student Perceptions of Interprofessional Clinical Education

## SPICE-R2 Instrument

Dear Student:

In this survey you are being asked about your attitudes toward interprofessional teams and the team approach to care. By *interprofessional team*, we mean two or more health professionals (e.g., nurse, occupational therapist, pharmacist, physical therapist, physician, social worker, veterinarian, etc.) who work together to plan, coordinate, and/or deliver care to patients/clients.

PLEASE NOTE: The following scale progresses from "Strongly Disagree (1)" → "Strongly Agree (5)"

INSTRUCTIONS:		<i>Strongly Disagree (1)</i>	<i>Disagree (2)</i>	<i>Neutral (3)</i>	<i>Agree (4)</i>	<i>Strongly Agree (5)</i>
Please be candid as you indicate the extent of your disagreement/agreement with each of the following statements related to interprofessional teams and the team approach to care.						
1. [T]	Working with students from different disciplines enhances my education	1	2	3	4	5
2. [R]	My role within an interprofessional team is clearly defined	1	2	3	4	5
3. [O]	Patient/client satisfaction is improved when care is delivered by an interprofessional team	1	2	3	4	5
4. [T]	Participating in educational experiences with students from different disciplines enhances my ability to work on an interprofessional team	1	2	3	4	5
5. [R]	I have an understanding of the courses taken by, and training requirements of, other health professionals	1	2	3	4	5
6. [O]	Healthcare costs are reduced when patients/clients are treated by an interprofessional team	1	2	3	4	5
7. [T]	Health professional students from different disciplines should be educated to establish collaborative relationships with one another	1	2	3	4	5
8. [R]	I understand the roles of other health professionals within an interprofessional team	1	2	3	4	5
9. [O]	Patient/client-centeredness increases when care is delivered by an interprofessional team	1	2	3	4	5
10. [T]	During their education, health professional students should be involved in teamwork with students from different disciplines in order to understand their respective roles	1	2	3	4	5

Factors:

T = Interprofessional Teamwork and Team-based Practice

R = Roles/responsibilities for Collaborative Practice

O = Patient Outcomes from Collaborative Practice

Dear Student:

In this survey you are being asked about your attitudes toward interprofessional teams and the team approach to care. By *interprofessional team*, we mean two or more health professionals (e.g., physical therapist, physician, therapist assistant, nurse, occupational therapist, pharmacist, physician, social worker, veterinarian, etc.) who work together to plan, coordinate, and/or deliver care to patients/clients.

PLEASE NOTE: The following scale progresses from "Strongly Disagree (1), Disagree

(2), Neutral(3), Agree (4), Strongly Agree (5)"

INSTRUCTIONS:

Please be candid as you indicate the extent of your disagreement/agreement with each of the following statements related to interprofessional teams and the team approach to care.

Factors:

T = Interprofessional Teamwork and Team-based Practice

R = Roles/responsibilities for Collaborative Practice

O = Patient Outcomes from Collaborative Practice

## SPICE R2 Instrument (Student Perceptions of Interprofessional Clinical Education-Revised Instrument, version 2)

Day count: 3  

Day 1

Amount of exercise: 6 Amount of uniq exercise: 5 Top 3 categories: ---

 2	hip, stand, knee, lower body, balance, ankle Hasn't Started	Duration 45 sec
 3	<b>Figure 8 Walk</b> stand, lower body, functional movements, balance, walk, aerobic Hasn't Started	Wait time 15 sec Duration 60 sec
 4	<b>Square Walk</b> balance, stand, walk, lower body Hasn't Started	Wait time 15 sec Duration 45 sec
 5	<b>Standing Heel Raise with Ball Squeeze</b> stand, lower body, balance, ankle, foot Hasn't Started	Wait time 15 sec Duration 45 sec
 6	<b>Heel Walk</b> stand, lower body, balance, walk, ankle, aerobic Hasn't Started	Wait time 15 sec Duration 45 sec

# Artificial Intelligence (AI) Based Physical Therapy Assessment

The term AI encompasses a variety of advanced computing methods — such as cognitive analysis, machine learning, and natural language processing — that can be used to accomplish tasks.

# Artificial Intelligence (AI) - Paradigm Shift

AI can help us, as humans, improve our intelligence and learn. AI functions at three levels: assisted, augmented, and autonomous.

Still, technology and AI can help us address complex issues. In the medical field, let us not place human intelligence and machine intelligence in separate realms. Instead, we should combine them to make "Medical Intelligence."

By thinking of it that way, AI can be a paradigm shift in health care and medicine.

# Artificial Intelligence (AI) - Role in PT

## Artificial intelligence application versus physical therapist for squat evaluation: a randomized controlled trial

Alessandro Luna<sup>1</sup>, Lorenzo Cesertano<sup>2</sup>, Jean Timmerberg<sup>1,3</sup>, Margaret O'Neil<sup>1</sup>, Jason Machowsky<sup>4</sup>, Cheng-Shiun Lou<sup>5</sup>, Jianghui Lin<sup>5</sup>, Zhiqian Fang<sup>5,6</sup>, William Douglas<sup>3</sup> & Sunil Agrawal<sup>1,10</sup>

Figure 2. Correct and incorrect squats as scored by AI and evaluators (E1 = Evaluator 1, E2 = Evaluator 2, E3 = Evaluator 3). "Control" refers to the first set of 10 unassisted squat repetitions. "Test" refers to the third and last set of 10 unassisted squat repetitions performed by participants after receiving feedback in the second set.

Feedback in control and test sets as provided by AI and evaluators

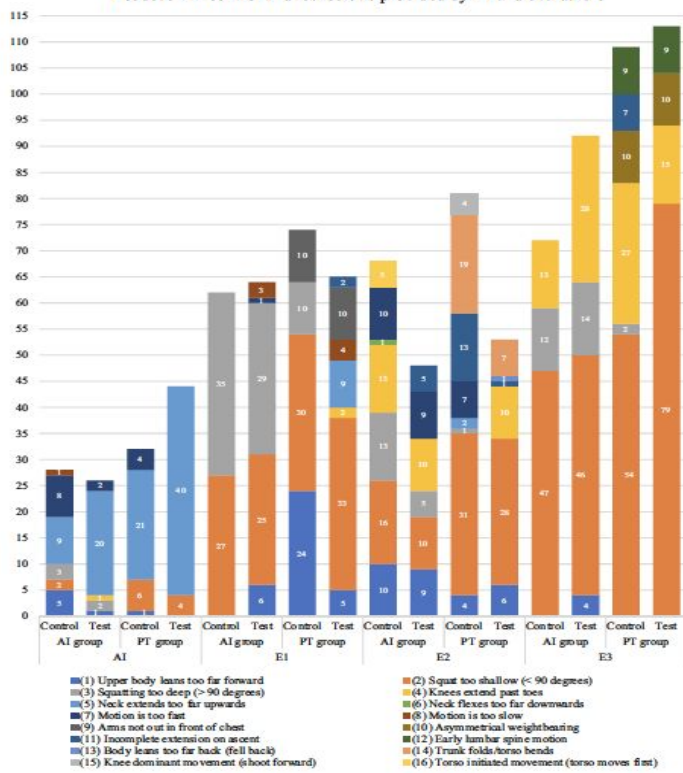

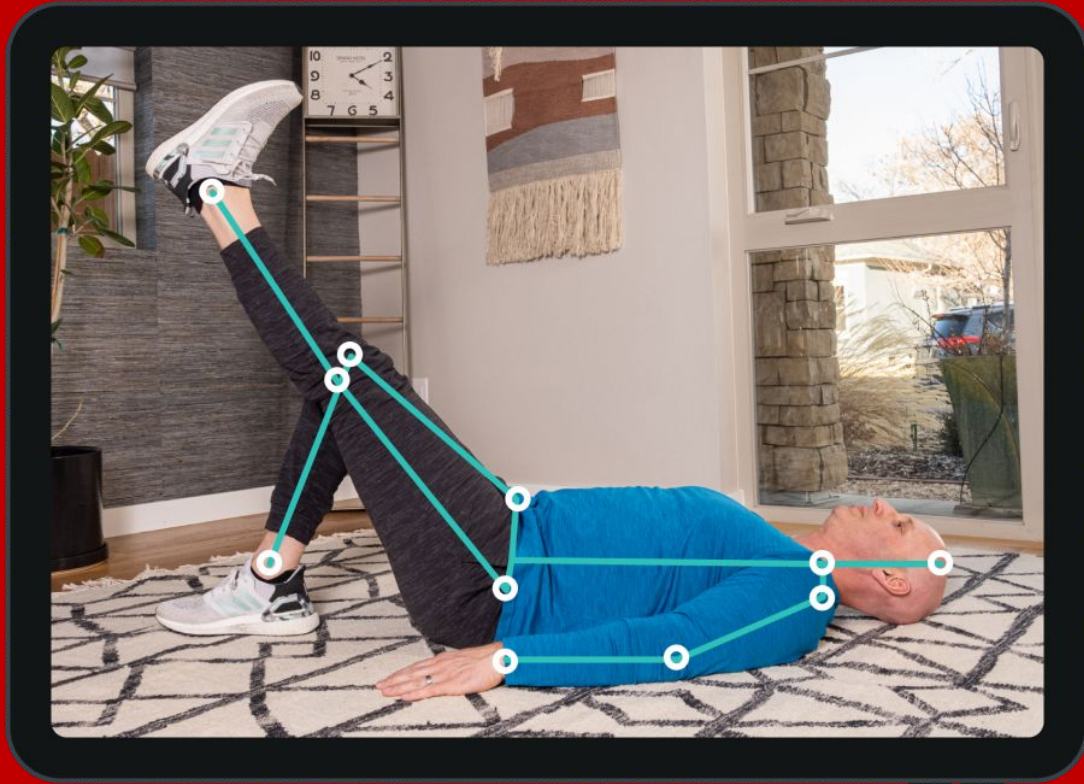

Figure 3. Feedback for incorrect squats as provided by AI and evaluators (E1, E2, E3).

# Data Driven Insights- Healthcare

# Data Driven - Physical Therapy - Track Movement

# Summary: Healthcare and Training the Providers

- **Practical Immersion:** Telehealth simulations offer realistic practice for clinical skills and decision-making, boosting student confidence and competence.
- **Collaborative Training:** Simulations foster interprofessional teamwork, replicating real healthcare dynamics and improving communication among future healthcare leaders.
- **Inclusive Access:** Remote simulations break down geographical barriers, ensuring diverse learners can access quality healthcare education and contribute to the evolving field.

# Let's Stay Connected
